Laura Richards. Agreed, and very frustrated! It will be interesting to see how Brian reacts. Laura also clearly does not want to indicate to the PSC that the disease research is of strategic importance. I sent her the research plan that you, Stewart and I went over and her comment back was that she could probably come up with some funds to hire a student for the brain dissections, one of the projects that I had put down for the PSC given their strong interest in historic samples.

Hi Kristi,

Which Laura? The information is going to be out there and the best thing is to have you, as the expert, there. We will need to work with Terry on a communications plan.

Thanks for the material. Will turn this around today.

Mark

Here are my proposed revisions. FYI, in case you do not already know, Laura does not want me to attend any of the sockeye salmon workshops that are not run by DFO for fear that we will not be able to control the way the disease issue could be construed in the press. I worry that this approach of saying nothing will backfire.

Subject: FW: Version 2

Hi Kristi,

Arlene and I are working on this summary report. The intent will be to use it as an attachment to a briefing note for the RDG as well as the basis for moving forward into whatever review is on. Can you please look at the disease section. Arlene has some material from Stewart as well but it has not been included yet. If you can get back to us by noon it would be great.

Thanks,

Mark

Stuart has responded but I need to summarize before incorporating into this summary
I don't think you forwarded anything from Brent. I'm going out for a walk but back shortly
Arlene
